

Thermo Scientific
Oxoid Antimicrobial Susceptibility Disks

Simple, flexible manual AST

Thermo
SCIENTIFIC

Ease of diffusion.

Maximum reproducibility.

Fight antimicrobial resistance with the simplicity and flexibility of disk diffusion using **Thermo Scientific™ Oxoid™ Antimicrobial Susceptibility Disks**. Available in a variety of common and specialized compounds and a full range of concentrations, Oxoid Disks allow you to achieve high quality results and meet the applicable CLSI, EUCAST and BSAC requirements.

Stringent quality control standards

To ensure maximum accuracy and reproducibility, Oxoid Disks are manufactured in accordance with appropriate quality standards, including BS EN ISO 9001:2008, ISO 13485:2003 and FDA 21 CFR part 820, and undergo comprehensive quality control testing. For clinical applications, Oxoid Disks are CE-marked under the IVD directive, 98/79/EC. In addition:

- Test methods and specifications (zone size) adhere to the applicable standard body guidelines with disk performance being the principle quality parameter
- Batch variation, moisture and concentration testing are also performed utilizing an antibiotic concentration specification of 90% to 125%* of the stated concentration

Conveniently packaged

- Each pack contains the instructions for use and five cartridges, which each contain 50 individually labeled paper disks impregnated with antimicrobial
- Each cartridge is individually sealed with a desiccant to maintain a moisture level of <2%, ensuring the long-term stability of the product and ease in storage
- QC testing results for each batch can be found at www.thermoscientific.com/microbiology

*For the majority of our AST disks we utilize an antibiotic concentration specification of 90–125% of the stated concentration to manufacture and release product. However, for a proportion of the range, a higher concentration may be required to ensure standard body derived performance specifications are met and maintained throughout shelf life. For these products the concentration may be increased to a maximum of 150% of the stated concentration.

Flexible dispensing options

The Oxoid range of disk dispensers provides accurate disk placement onto a variety of agar plates, including 90mm, 120mm and 140mm diameters, with simple, one-handed operation. Most dispensers are height adjustable to accommodate individual laboratory requirements, and stored in fully interlocking containers to prevent the ingress of moisture and maintain the viability of the antibiotics. The base of the container also contains a desiccant, which ensures a moisture-free environment for opened cartridges, and preserves the integrity of the product.

A turbidometer, for the accurate preparation of 0.5 McFarland inoculums, is also available, aiding standardization and contributing to reproducible, reliable results. The turbidometer is simple to use, giving clear indication of the density of the inoculum.

The latest antimicrobials

Oxoid Disks are backed by over 35 years of experience in antimicrobial susceptibility disk development and production. We maintain close relationships with many pharmaceutical companies and introduce new disks to the market in a timely manner when new compounds become available.

Superior service & support

When you choose Thermo Scientific products for your microbiology needs, consider it the start of a valuable partnership. Whether you need assistance with protocols, product transitions or troubleshooting, our team of experts is ready to help. With best-in-class, multi-language technical support, there's no better partner for your clinical demands than Thermo Fisher Scientific.
